# Vape Detection Solution for Schools

Detecting and preventing vape usage in schools

# INTEGRATED SECURITY

**V**aping and e-cigarettes pose significant health risks to students and are a challenge for school management when it comes to enforcing usage policies.

Our **Vape Detection Solution** monitors the air quality in targeted areas such as cafeterias, halls or bathrooms. Equipped with precision sensors, it promptly identifies instances of vaping.

Optional CCTV devices located in a target area or its entrance can capture video footage of the vicinity at the time the vaping instance took place.

On detection, a notification will be sent in the form of a push notification, SMS message or email.
